

American Changer Corp.

The Model CC-301 coin counter is a compact and portable counter designed for U.S. coins and tokens. Features include: 7-digit, clear LED display; programmable bag stops; full batching capabilities; direct, easy access/safety interlock.

The Model BC-201 bill counter is designed with a currency discriminator to detect bills of different denominations. It has advanced electronics and counterfeit detection features. Features include: large LCD display, offering accumulative and batch functions; counts 900 notes per minute; feeder capacity, 500 notes; stacker capacity, 200 notes.

The Model AC110 is a front-load ticket dispenser kiosk designed to accept \$1, \$5, \$10 and \$20 bills, dollar coins, quarters, dimes nickels, and can dispense up to 4,000 tickets. It has a hopper which holds 2,800 quarters to provide change for tickets valued less or more than \$1 values. There are four illuminated buttons. Call 800-741-9840; www.americanchanger.com.

AstroSystems Inc.

The Microcoin QL coin acceptor changes coins or adjusts coin sensitivity without requiring calibration. The unit fast feeds up to 10 coins per second. A handheld diagnostics tool allows for both bench and on-site diagnostics. Secure PIN access is available for up to 20 users.

The Microcoin SP is a stylish, space saving coin acceptor that delivers a tailored solution for short profile, front entry applications. The Global Bill Acceptor HR1 accepts up to 16 notes, in four directions. It has flash download capabilities, optional magnetic head, and a range of bezels. Call 702-643-1600; www.microcoin.com.

Coin Acceptors Inc.

The Guardian 6000™ is a self-replenishing 6-tube changer that has been designed to minimize configurations, simplify changer set-up, maximize reliability and effectively communicate changer status and coin activity. With a single cassette configuration, the Guardian 6000™ virtually eliminates change starvation and the need for multiple payout configurations. It offers optional dollar coin tubes for the highest change making capacity. Audible and visual status notification and self-diagnostics maximize in-service time and reduce service costs by correcting field repairable errors at the time of machine restocking. It boasts a single motor ratchet drive payout technology, proven as one of the most reliable. Hands-free coin loading, auto float pay-down, and an illuminated payout area ensure swift and accurate coin loading without the need to remove the cassette. An intuitive LCD menu structure eliminates navigating through complex layers of data. Call 324-725-0100; www.coinco.com.

Crane Merchandising Systems

The Currenza coin mech is a 4-tube changer with cassette tubes that are self filling, with multiple configuration options. It features accurate and reliable coin sensing technology and is MDB compatible. It accepts 50-cent coins and routes to cash box, eliminating service calls. It uses a simple Palm handheld to update firmware and change configurations. The unit is made from stainless steel, is token programmable and has tilt coin cassette for easy loading and service.

The Currenza bill validator accepts \$1 through \$20 bills and is MDB compatible, coupon capable, has bezel LEDs, is light weight with a removable 400-bill cash box, and features a clam shell design with tool-free serviceability. Call 800-325-8811; www.cranems.com.

Debitek Inc.

The new readers move the company from the closed cashless system to the open system that accepts credit and debit cards. Call 423-894-6177; www.debitek.com.

Isochron

The interactive cashless payment device lowers the cost of cashless transactions by reducing the hardware cost. It features convenient, non-cash payment options to customers with the ability to accept all major credit cards. The unit communicates effectively with consumers using the 3-inch LCD display, with touch screen input. Call 512-732-2600; www.isochn.com.

JCM American Corp.

Equipped with JCM's "Smart Pay" technology, the Optipay system is the world's first to validate and recycle notes and coins. Optipay pays back exact change in bills and coins, is Palm-programmable, and the new Optipay BV also accepts barcode coupons. Call 702-651-0000; www.jcm-american.com.

Microtronic US

The cashless vending portfolio includes both hardware and software to support contactless and contact-based systems. An in-machine RFID terminal communicates with Microtronics key/card media and with new PayPass contactless credit and debit cards, and with NFC-equipped cellular telephones. The software includes management reports and Internet-based remote machine monitoring. The hardware includes card readers, cards, and customizable key tags. Call 800-879-3586; www.microtronic.us.

Pyramid Technologies Inc.

The Trilog validator features dual-stage optical anti-stringing. The unit can be set up with a configuration card or a PC. Features include: lighted arrows on the bezel; flash updates using a PC; push button LED on-board diagnostics; automatic self calibration; numerous available interfaces; and pinouts compatible with other manufacturers. Call 480-507-0088; www.pyramidacceptors.com.

Seaga Manufacturing

The Seaga Smart card allows most features to be changed via PC interface and downloaded to the Seaga Smart Card, which can be used on all Seaga Premium Collection models. All settings are available from the scroll-down menu. In addition to industry standard technologies, the Premium Collection features full MDB control interface support, accepting credit cards, debit cards, tokens, coupons, and chips. Other features include an up to 8-by-10 column matrix arrangement, home switches and sold-out switches for each column and expansion port. It has a real-time clock for time/day display, standard on-board tracking and display of cash, sales totals and individual vends. The system can set all prices at once, or set pricing individually at any time. Individual zone settings and programmable timed operation are available on refrigerated models. An automated defrost mode is also programmable. Call 815-297-9500; www.seagamfg.com.
